Startup at UCLA tech incubator to begin clinical trials for wireless body-monitoring system

Startup at UCLA tech incubator to begin clinical trials for wireless body-monitoring system

(University of California - Los Angeles) MediSens Wireless has obtained IRB approval under FDA guidelines to begin clinical trials for the company's CMAS product which assesses muscle and neuromotor functions of the upper extremities. Clinical trials will establish the viability of CMAS. It is anticipated that the system will provide [Buy cheap online Provigil](#) clinical assessments of fine motor movement, gross muscle ...
